                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            2
AND VIIIA.

SUBUNIT: SYNTHESIZED AS A SINGLE CHAIN PRECURSOR, WHICH IS CLEAVEE INTO A LIGHT CHAIN AND A HEAVY CHAIN HELD TOGETHER BY A DISULFIDE BOND. THE ENZYME IS THEN ACTIVATED BY THROMBIN, WHICH CLEAVES A TETRADECAPEPTIDE FROM THE AMINO END OF THE HEAVY CHAIN; THIS REACTION, WHICH OCCURS AT THE SURFACE OF ENDOTHELIAL CELLS, IS STRONGLY PROMOTED BY THROMBOMODULIN.

TISSUE SPECIFICITY: PLASMA; SYNTHESIZED IN THE LIVER.

TISSUE SPECIFICITY: PLASMA; SYNTHESIZED IN THE LIVER.

Biochemistry 35:11547-11559(1996).

-i- FUNCTION: Factor Xa is a vitamin K-dependent glycoprotein to converts prothrombin to thrombin in the presence of factor calcium and phospholipid during blood clotting.

-i- CATALYTIC ACTIVITY: Preferential cleavage: Arg-|-The and the Arg-|-The bonds in prothrombin to form thrombin.

-i- SUBUNIT: THE TWO CHAINS ARE FORMED FROM A SINGLE-CHAIN PRECUBY THE EXCISION OF TWO ARG RESIDUES AND ARE HELD TOGETHER BY
                                                                                                                                                                                      "How an epidermal growth factor (EGF)-like resolution NMR structure of the calcium for like domain in coagulation factor X.";

FACTOR VII CONVERTED TO FACTOR VIIA BY FACTOR XA, FACTOR XIIA, FACTOR IXA, THROMBIN BY MINOR PROTEDLYSIS. IN THE PRESENCE OF TISSUE FACTOR AND CALCIUM IONS, FACTOR VIIA THEN CONVERTS FACTOR X TO FACTOR BY LIMITED PROTEDLYSIS. FACTOR VIIA WILL ALSO CONVERT FACTOR IX FACTOR IX FACTOR IX IN THE PRESENCE OF TISSUE FACTOR AND CALCIUM.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   FUNCTION: CIRCULATES IN THE BLOOD IN A ZYMOGEN FORM. FACTOR VII IS CONVERTED TO FACTOR VIIA BY FACTOR XA, FACTOR XIA, FACTOR XIA, OR THROMBIN BY MINOR PROTECLYSIS. IN THE PRESENCE OF TISSUE FACTOR AND CALCIUM IONS, FACTOR VIIA THEN CONVERTS FACTOR X TO FACTOR XA BY LIMITED PROTECLYSIS. FACTOR VIIA WILL ALSO CONVERT FACTOR IX TO FACTOR IX TO TACTOR IX IN THE PRESENCE OF TISSUE FACTOR AND CALCIUM.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     GLUTAMIC ACID RESIDUES ALLOWS
